

What's New in TouchBistro 5.9

In TouchBistro 5.9 we've removed the **General** setting. See these release notes for where to find options previously found under **General**. TouchBistro also now supports the use of a Customer Facing Display. We've also added support for Chase Paymentech Canada.

Consult these release notes for full details on these changes along with other improvements added in version 5.9.

Need More Help?

Email support@touchbistro.com if you are experiencing any issues with this update.

iOS8 Only Support

The TouchBistro 5.9 update is available only to users with iPads updated to iOS8. If your iPad is still running iOS7, you will need to update to iOS8 before the 5.9 update appears in the App Store.

Removed Admin Setup's General Setting

Many users found the options under the **General** setting section confusing. We have moved the options under **General** to more appropriate settings screens. You will find the previous **General** options as follows

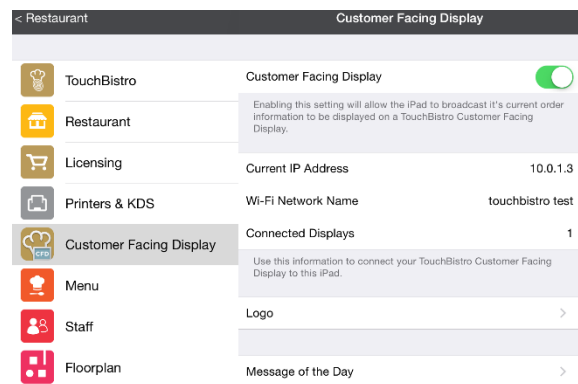

Option	New Location
Card Type	Payment Gateways
Tax Settings	Menu
Void Reasons	Menu
Discounts	Menu
Gift Cards	Payment Gateways
Include Tip Line	Payment Gateways
Default Card Swipe Action	Payment Gateways

Option	New Location
Current Order # / Current Bill #	Bill & Chit
Gratuity settings	Menu
Archive Data	TouchBistro

Customer Facing Display Support

TouchBistro now supports using a second iPad as a customer facing display (CFD). The CFD is a separate app available from the Apple App store. A **Customer Facing Display** setting page has been added under **Admin | Admin Settings**.

See the [Admin Guide](#) for information on setting up and using the CFD.

Before launching the CFD app, you will want to enable and customize how your CFD appears. As well, note the Current IP Address displayed in the **Customer Facing Display** settings screen. This would be entered into the CFD's start up screen.

Resetting TouchBistro CFD IP Address

Note, when you install the TouchBistro CFD, a settings option for the app is added to your iPad **Settings** screen (accessible when you tap the **Settings** icon on your iPad home screen).

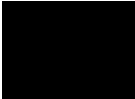

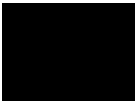

Scroll down various settings options to see the TouchBistro CFD settings option.

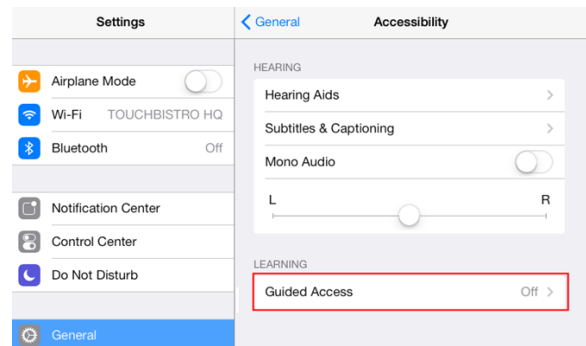

If the IP address of your TouchBistro iPad changes, close the TouchBistro CFD. Visit the TouchBistro CFD settings item and slide **Reset IP Address** to the green position. Reopen the TouchBistro CFD and enter the new IP address reported in TouchBistro.

Images to Prepare for CFD Customization

To customize the CFD, you should prepare four images:

Logo	Size	Description
Logo	500 x 65 	A horizontal banner graphic that can incorporate your logo.
Message of the Day	512 x 768 	A portrait graphic that acts as a background for your message of the day.
Welcome Message	1024 x 768 	A horizontal image that acts as a background for the welcome screen. The welcome screen displays when TouchBistro is not in register/POS mode.
Payment Screen	1024 x 768 	A horizontal image that acts as a background for the screen that pops up after a payment has been made.

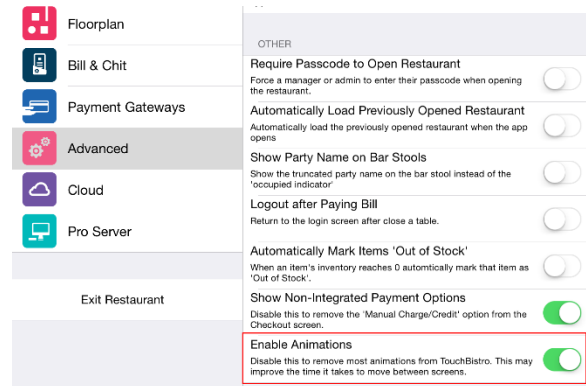

Preventing Customers from Exiting Out of the CFD

You can use your iPad's **Guided Access** feature (found under your iPad's **Settings**) to lock your iPad into CFD only mode. See [Prevent Users Exiting TouchBistro or TouchBistro CFD and Accessing Other Apps](#) for step by step help.

New Advanced Options

Enable/Disable Animations

Under the **Other** section, we've given you the ability to disable slide-like transition effects when moving between screens or opening dialog boxes.

Payment Gateways

Chase Paymentech Support (Canada Only)

TouchBistro now supports Chase Paymentech and the iTC250 terminal for Canadian venues. We've added it as a selectable payment gateway under **Admin | Admin Settings | Payment Gateways**.

Merchant Warehouse is now Cayan

The Merchant Warehouse payment gateway has changed its name to Cayan. This has been updated in 5.9.
