

What's New in TouchBistro 9.0

If you are a multi iPad user, TouchBistro will now autodetect your Pro Server restaurant. Support options normally available from the Mac Pro Server app can now be accessed via your iPad. Post-9.0 updates will now let you push a Pro Server update to the Mac computer from your iPad.

The **Admin Setting Screen** now has a **Search** box, helping you find options and settings. **Security** and **Advanced** options have been reorganized. See these release notes for a complete list of changes.

The workflows involved in performing refunds and staff returning from a break have been improved.

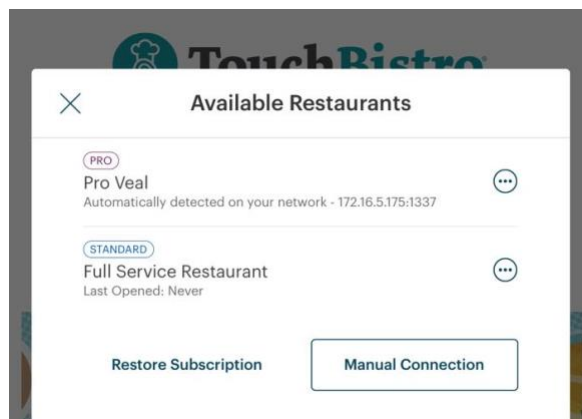

TouchBistro Customer Facing Display has a new update available in the app store. CFD 1.1 now supports the British pound (£) currency symbol.

Consult these releases note for further details about these changes and more.

Need More Help?

Email support@touchbistro.com if you are experiencing any issues with this update.

Pro Server Now Automatically Detected

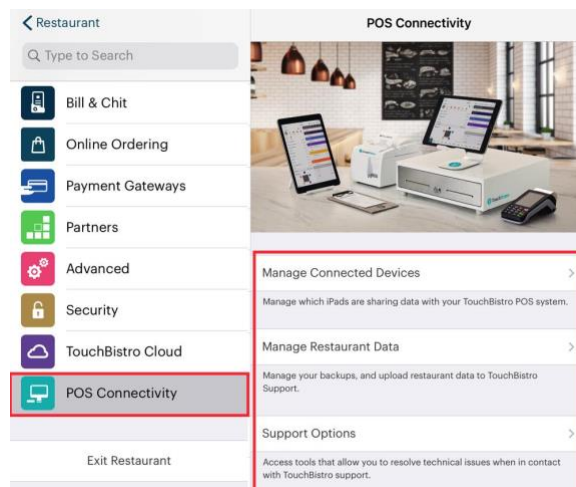

TouchBistro, upon launch, will now automatically detect your Pro Server running on your network.

If you do not see it in the list of available restaurants, you can tap **Manual Connect** and supply the Pro Server's IP (e.g., 10.0.1.99) address and port number (1337).

In addition to Pro Server auto detect, the available restaurants screen is visually different. If you have a Pro and Standard (1 iPad venue) on the same iPad they are no longer grouped under separate tabs.

POS Connectivity

The **Local Pro Server** option is now called **POS Connectivity**. The **POS Connectivity** screen now allows you to manage connected iPads and access support options previously only available from the **Pro Server** app running on your Mac computer.

Updating Pro Server and iPads Post 9.0

The Pro Server app on your Mac computer must always match TouchBistro POS in terms of version number. If you updated your iPads to version 9.0, Pro Server likewise needs to be updated to 9.0. To help you with future updating, you now have more control over updating via your iPad in two ways:

The Pro Server Has Been Updated but the iPads Have Not

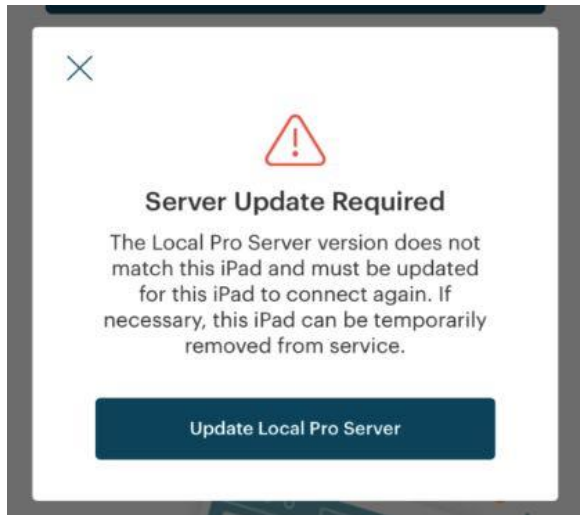

In future, if you update Pro Server to, say, 9.1 but forget to update TouchBistro POS to 9.1, the next time an iPad tries to connect to the updated Pro Server it will prompt you to update the iPad.

You can tap on **App Store** and be taken to the update page.

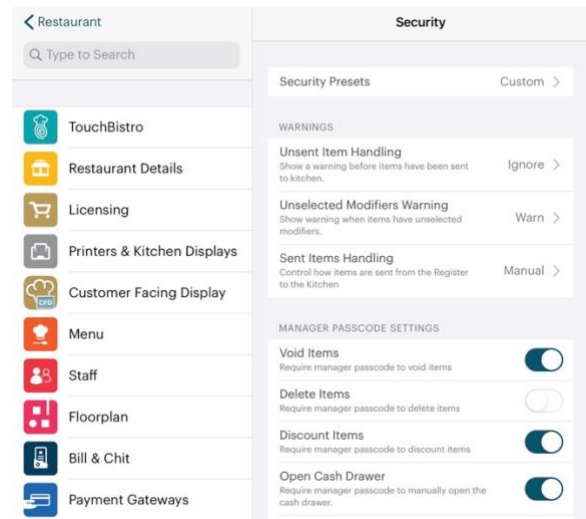

The Pro Server Has NOT Been Updated but the iPads Have

In future, if you update your iPads to the latest version, say, 9.1 but forget to update the Pro Server on the Mac to 9.1, the next time an iPad tries to connect to the un-updated Pro Server, TouchBistro POS will prompt you to push an update to Pro Server on the Mac.

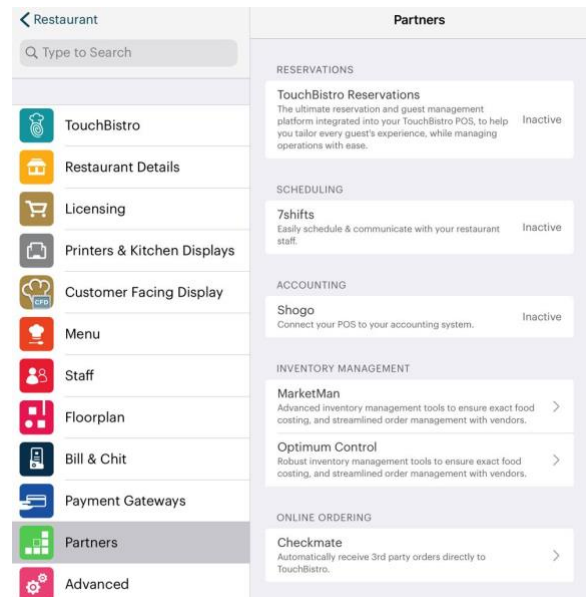

Tap **Update Local Pro Server** and the iPad will push the update to the Mac computer.

Improved Admin Settings Screen

We have improved the look and organization of the **Admin Setting** screen.

Partners

The **Partners** page now groups partner integrations based on integration type. For example, Bar Management integrations are now grouped under **Bar Management**.

Advanced

Several options have been moved to different sections.

Option	Old Section > New Section
Prompt for guest name	Point of Sale > Order Input
Print and close from POS	Point of Sale > Printing
Return After Printing	Order Input > Printing
Open Cash Drawer When Accepting Cash Payments	Order Input > Payments
Open Cash Drawer When Accepting Credit Payments	Order Input > Payments
Require Auth #	Order Input > Payments
Print and Close from Table	Order Input > Printing
Enable Max Order Number	Order Number > Order Input
Show Non-Integrated Payment Option	Other > Payments

Note, we've also created a new **Payment** section (see the chart above for what options were moved to the new Payment section). The ordering of the sections has changed slightly. For example, the **Register Buttons** section has been moved up in order of appearance.

As well, some of the menu items within sections have slight new orders. For example, **Change Register Buttons** is now at the bottom of the **Register Buttons** section.

The Point of Sale section has been removed and a new Payments section has been added.

Security

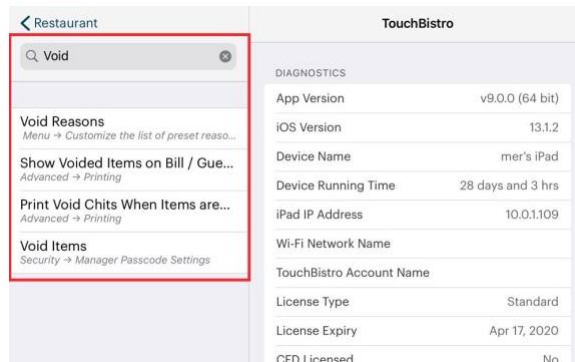

The options on the **Security** screen have been organized into sections. Several options appear in a different order.

Options that force manager approval have been placed into a **Manager Passcode Setting** section and have slightly different names.

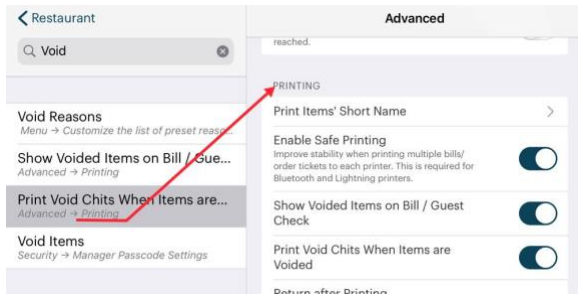

Old Option	New Option
Require Manager Passcode to Open Cash Drawer	Open Cash Drawer
Require Manager Passcode to Discount Items	Discount Items
Require Passcode to Transfer Tables Between Staff	Transfer Between Staff
Require Passcode to Transfer Tabs/Deliveries/ Takeouts Between Staff	Transfer Tab/Deliveries/ Takeouts
Require Passcode to Transfer Seats/Parties	Transfer Seats/Parties
Require Passcode to Change Gratuity	Change Gratuity
Require Passcode to Open Restaurant	Open Restaurant

Option Search

If you're unsure where a particular option is located under **Admin Settings**, you can use the new **Search** field to search for a key term in the option.

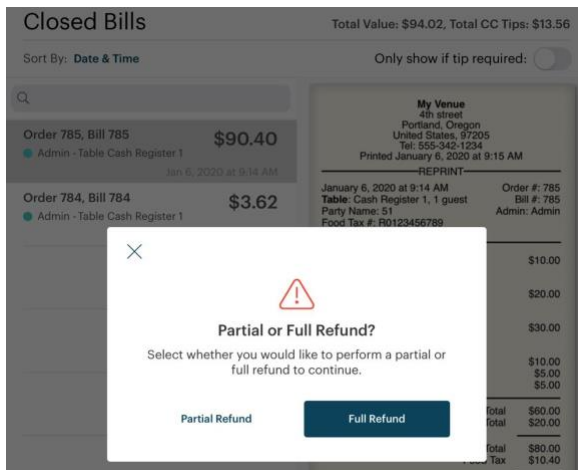

For example, if you're wondering about options that control voids, enter "void". The **Search** field will return several options that match your search. Click on one of the returned matches.

TouchBistro will take you to the appropriate **Admin Settings** screen. If the option is located in a particular section, the match returned in the left-hand panel will indicate the section the option is found in. In the pictured example above, the results indicate the **Print Void Chits When Items are Voided** option is found in the **Printing** section of the **Advanced** screen.

Improved Refund Workflow

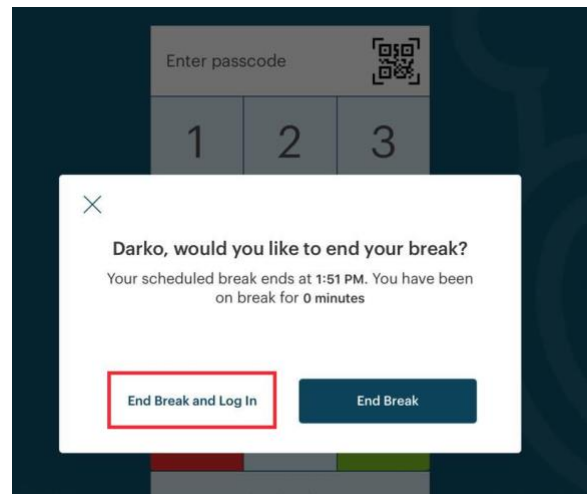

If you are performing a refund, TouchBistro will now prompt you if you are doing a full or partial refund.

If you select **Full**, you will be immediately taken to the **Checkout** screen for the negative return invoice.

If you select **Partial**, you will be taken to the order screen. There you can delete items you're not refunding.

Ending Breaks

When a staff member ends his/her break, the staff member is now given an option to end the break and log back into TouchBistro.

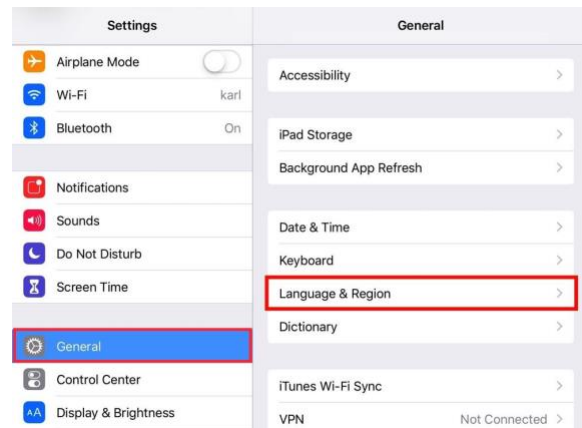

Customer Facing Display Update

We've released an update of our Customer Facing Display (CFD 1.1). If you update to version 1.1, the update will replace the old CFD iPad icon with a new icon.

CFD 1.1 now supports the £ symbol. To change the supported currency symbol to the £ sign, you will need to change the CFD iPad's region and language settings.

This can be accessed from your iPad's **Settings** utility.

Tap **General** | **Language & Region**.

Set your **iPad Language** to **English UK** and **Region** to **UK**.
