

What's New in TouchBistro 9.3.11?

We've made substantial changes to Item Modification. Although many are updates to the look and feel, there are some workflow changes you need to be aware of. Note as well, you will start to see some changes to your iPad reporting. No changes to reporting are in this version but you will see warnings about coming changes.

Consult these releases notes for further details about these changes and more.

We've reorganized the modifier icon pallet. Icons are now group by **Food**, **Drink**, **Utilities** (kitchen items), and **Other**. Of note, we provide some icons that can help indicate allergy safe items or items that are vegetarian/vegan friendly.

Changing Modifier Groups at the Menu Item Level

If you edit associated modifier groups at the menu item level, the pop-up screen has been updated but there are no functional changes.
