What's New in TouchBistro 9.3.2

We've updated the Admin Settings screen to make it more efficient to use for day-to-day operations. Third-party integration information and setup screens have been moved to the TouchBistro App screen.
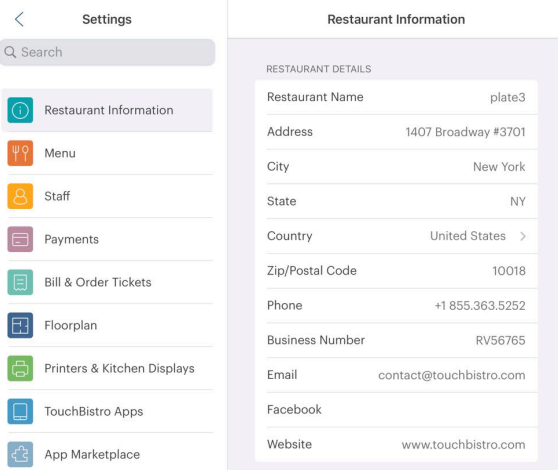

Consult these releases notes for further details about these changes and more.

Need More Help?

Email support@touchbistro.com if you are experiencing any issues with this update.
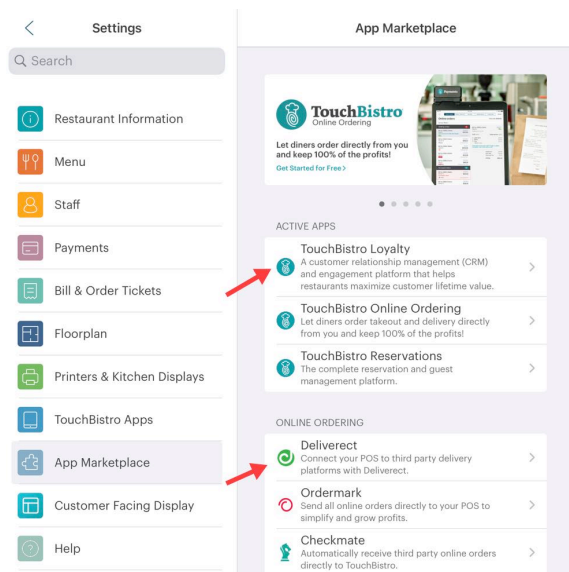

New Admin Settings Screen

We've changed the look and feel of the **Admin Settings** screen. Previously options were ordered in order of use for setting up your restaurant. However, you might typically do that once. After that the options were not in the most efficient order for managing your venue.

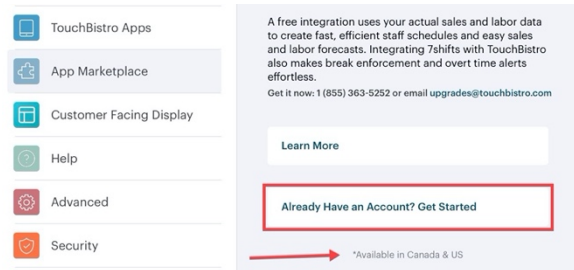

To this end, we've grouped the options Admins need to use the most post-setup. For example, **Menu** is now at the top as most venues regularly adjust their menu (86ing items, changing prices, adding new specials, etc.).
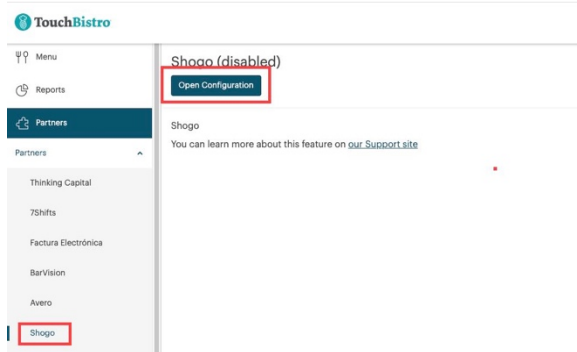

Partners Renamed App Marketplace

We've renamed the **Partners** screen to **App Marketplace**. You can now view a list of all third-party integrations as well as key TouchBistro companion apps available for integrating with TouchBistro POS.

If you need to access your set up screen for third party integrations like 7shifts or Factura Electronica you now access those screens here.

Tap the **Get Started** button to access the actual setup screen. If you're not yet integrated, each partner screen has a **Learn More** link plus at the bottom an indication what countries the third-party integration is limited to.

Shogo

Shogo is now enabled/disabled from your cloud portal. We have also removed the ability to re-upload previous business days from TouchBistro POS.
